REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance:

Auerbach (US Patent 5,673,316) teaches encrypting the instructions for modification and state information using random part encryption keys (PEKs) (column 6, lines 6-7).

Bisbee teaches storing original documents with a digital signature verifying their integrity (column 11, lines 43-44) and that every time an original document is modified, it is scanned back in and stored so that all activity is tracked (column 14, lines 5-13).

However, the prior art fails to teach or suggest modifying the original data based on the first to the nth piece of modification information when the determination means determines that none of the first to the nth piece of modification information has been altered, modifying the original data based on the first to the nth piece of modification information when the determination means determines that none of the original data and the first to the nth piece of modification information has been altered and that an $(m + 1)$ th piece of modification information has been altered, and not modifying the original data when the determination means determines that either the original data or the first piece of modification information has been altered.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
